

Genable

EPOXY PRIMER

Demonstrating the ease of application and outstanding performance benefits of graphene-enhanced coatings.

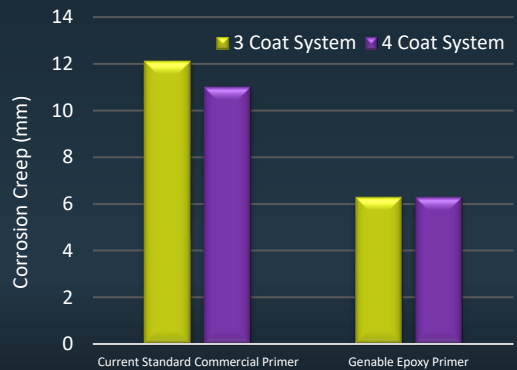

Graphene-based Anti-Corrosion Paint

The high performance Genable Epoxy Primer is enhanced with the **synergistic benefits** of graphene and low levels of zinc phosphate.

Graphene's two-dimensional structure in the nanoplatelet form results in very high aspect ratio, high surface area materials which are well suited to industrial paints and coatings.

Creep Assessment after 1440 Hour Neutral Salt Spray

Users can significantly **extend the life** of existing coatings and reduce the frequency and cost of asset maintenance using a more sustainable alternative to traditional paint chemistries.

The 3 Coat system gives a **50% reduction** in corrosion creep compared to the commercially available 4 coat system after 1440 hours NSS
