

INNOVATE. PERFORM. STAND OUT.

Genable **HC PRIMER**

Graphene-based Anti-Corrosion Paint

Incorporating graphene into a high-performance paint system offers corrosion protection suited to the most **extreme** conditions.

AGM graphene-enhanced primers reduce the environmental impact of paints and coatings by extending coating life to reduce the frequency and cost of asset maintenance using a more **sustainable alternative** to traditional paint chemistries.

Demonstrating the ease of application and outstanding performance benefits of graphene-enhanced coatings.

The new **Genable HC primer** offers increased **barrier performance** to reduce corrosion damage over time in harsh environments, such as offshore and marine areas.

The formulation has been tested to ISO12944-Part 9, including immersion, cathodic disbondment and cyclic ageing testing.

Working with organisations like the **Environment Agency**, the **Genable** range of graphene-based corrosion protection primers are proving the clear life cycle, cost and performance advantages over standard alternatives.
